Ahmed Galal Abdelhai

Data Analyst - Software Engineer

Cairo, Egypt • 01094160189 • Gmail • LinkedIn • GitHub

Professional Brief

Data Analyst and Software Engineer with a practice rooted in analytics and business intelligence. Designing and developing software solutions that extract meaningful insight from data — with an approach to every problem built on three orientations: analytical, to surface what the data reveals; logical, to structure it precisely; and commercial, to ensure it serves a real decision. That combination delivers end-to-end capability — from identifying the problem through to designing and implementing its solution.

Skills & abilities

• **Business Intelligence & Visualization:** Power BI, Looker Studio, Excel (Power Query, PivotTables, Solver), Interactive Dashboard Design, Visualization Reporting, Performance Monitoring, Operational & Strategic Analysis.

• **Analytics & Modeling:** Python (Pandas, NumPy, Seaborn, Matplotlib), SQL, Exploratory Data Analysis, RFM Analysis, Customer Segmentation, Cohort & Trend Analysis, Statistical Modeling, A/B Testing.

• **Data & Infrastructure:** Data Cleaning & Validation, Data Quality Assurance, Scripting & Automation, Web Scraping, Version Control (Github)

• **Software Engineering & Systems:** SDLC, Modular Architecture, System Design & Analysis, Distributed Systems Principles, Scalable Solution Design, Debugging & Optimization.

Work Experience

iCareer (Internship) **Sep 2025 - Dec 2025**

Role: Operations & Engagement Coordinator

Four workshop cycles, shifting priorities, and stakeholder expectations that rarely stayed fixed. Replaced the informal follow-up that kept falling through the cracks with one structured tracking system both teams actually used — turning a persistent coordination problem into a repeatable execution standard.

Hiring Genius (Internship) **Aug 2025 – Aug 2025**

Role: Human Resources Recruiter

Screened 80+ candidate profiles across multiple sourcing channels, coordinated 15+ interviews end to end, and pushed qualified pipeline volume up by 20% within a single recruitment cycle — all within one month, which demanded fast judgment and zero margin for disorganized handoffs.

Elevvo Pathways (Internship) **Jul 2025 – Aug 2025**

Role: Data Analyst

Pulled and filtered data across multiple sources down to a working dataset of 5,000+ records, then took it through the full cycle — cleaning, transformation, exploratory analysis, and visualization built from scratch. Caught null revenue fields and broken date formats before they reached the modeling phase. The final report went directly into a strategic business performance review as the basis for the conversation, not background material.

Digital Egypt Pioneers Initiative – DEPI (Internship) **Oct 2024 – May 2025**

Role: Data Analyst

Spent seven months inside real business datasets — SQL, Excel, Power BI — working the full cycle from messy raw data through segmentation, KPI reporting, and final delivery. What the program built beyond the technical work was discipline: never open a dataset before the question is clear, never model before the data is clean, never ship a deliverable that doesn’t point somewhere actionable.

Education

Egyptian Chinese University | B.Sc. in Engineering **Oct 2022 – June 2026**

Major: Software Engineering

Projects

Customer Segmentation & Marketing Analytics | R, SQL, Power BI

Used analytical techniques to understand how customers behave, how well our campaigns and marketing channels were performing, as well as identify markers for customer churn. This gave me the insights to create an interactive dashboard in Power BI. Built a regression model to understand the relationships between variables with an adjusted R^2 value of 82.9%.

RFM-Based Customer Analytics | Python, Pandas, Seaborn, Jupyter

Analyzed a dataset of 500K+ transactions made by ~4000 customers from the UCI Online Retail dataset. Used RFM (Recency, Frequency and Monetary) to segment customers into groups such as loyal, high spenders and inactive customers.

SQL Sales Performance Analysis — Chinook Database | SQL

Analyzed approximately 22K rows of data across 11 relational tables using SQL. This included joins, aggregations and window functions. This was used to understand sales of products across 200+ tracks, revenue by country across 24 countries and revenue trends across each month.

NYC Airbnb Market & Revenue Analysis | Looker Studio

Analyzed a dataset of 48K+ Airbnbs across the 5 boroughs of NYC. This was used to understand pricing, different room types, and revenue per location. It also gave insight into how much revenue could be earned per month. Data was cleaned and validated and a revenue metric was created. This allowed me to create an interactive dashboard which compared different segments of Airbnbs.

Aethea – AI Medical Assistant – University Grad Project | Research & Literature Review
Advanced Sciences and Technology Journal (ASTJ). Vol.3 Issue.2 2026

-Conducted research on various research papers to verify references and collect evidence in order to provide the technical argument for why the graduation project is being completed.

-Created a literature review to include various aspects of the design including Clinical Decision Support, Explainable AI, Integration with Healthcare Workflow and Patient Data Privacy.

Certificates

Digital Egypt Pioneers Initiative (DEPI) - Google Data Analyst Specialist

A comprehensive 8-month data analytics training was completed through DEPI, covering end-to-end concepts including data cleaning, analysis, visualization, and statistical techniques. Proficiency was developed in tools like Excel, SQL, Python, and Power BI—applied across real-world projects reflecting 100% of core industry practices.

IBM SkillsBuild - Data Analytics

Demonstrated advanced proficiency in data analysis, data visualization, and statistical techniques by leveraging Excel, Python, and SQL to extract actionable insights, automate workflows, and support data-driven decisions—enhancing analytical efficiency by up to 60% in practical applications.

Manara – System Design and Architecture

Developed advanced proficiency in software architecture, system design, scalability principles, and distributed systems through practical engineering scenarios—strengthening the ability to design maintainable, resilient, and production-ready software solutions aligned with modern industry practices.

Cisco Networking Academy – Data Analytics Essentials

Built a strong foundation in the end-to-end data analytics lifecycle by applying Excel, SQL, and analytical methodologies to transform, prepare, analyze, and communicate data effectively—reinforcing practical decision-making through structured analytical workflows.
